

Snapchat's Location Sharing Feature: SnapMap

Snap Map uses mobile phone technology to find out where its users are located.

It then draws users on a map in real-time, *each* time the Snapchat app is opened. You can then browse the map to see where your friends are located at that specific moment, or where they were last seen.

To disable Snap Map, a user would enable the Ghost Mode feature. (Shown below.)

1

With the Snapchat camera open, swipe down to view map.

2

Click on the settings gear in the top right corner.

3

Switch the toggle over to the right side.

4

The indicated popup will appear. Select 'Until Turned Off.'

Enable Ghost Mode?

Choose a duration.

3 hours

24 hours
